I have a solar panel (Li-ion in parallel with a 25W solar panel) and a 3V relay (bilder). Can I connect them directly? My thinking is that the current would flow through the relay, and I would still get a small amount of current going through the solar panel, which I don't want. I'll try to be more specific. Here is the relay: And the solar panel: A: I don't see any reason why not. The solar panel and relay will create an output voltage of approximately 3.3V with a current of 100mA. The relay will turn on at current of 50mA which means that the 3.3V at the source will cause the relay to turn on at 100mA. If the relay is on, then the 3.3V will turn on the load. I can't see any reason why it would draw more current than that as long as it's connected in parallel. The relay is rated for 10mA maximum current continuous current and the solar panel is rated for 1A maximum. 464. 465. 466. 467. 468. 469. 470. 471. 472. 473. 474. a1d647c40b
