

Where's VRChat?

User.com | VRChat | Android | VRChat App. The free, immersive social virtual world VRChat allows you to become a real ... The free social VR game VRChat is available for all Google Daydream viewers. Visit VRChat - a place for virtual reality and immersive entertainment. VRChat is a free social virtual reality social networking app that allows users to create and share ... VRChat is a free social virtual reality social networking app that allows users to create and share virtual experiences. Q: how to enable wifi using a BLE device on esp32 I'm trying to write a sample application that enable wifi module on a esp32. I'm using esp32_wifi_enable to enable wifi. #include void main(void) { ESP_LOGI(TAG, "%d", esp_wifi_set_opmode(1)); } It shows 0. I have also tried it using esp_wifi_start which works for me. The question is I couldn't find a way to get the esp_wifi_is_enabled() to be true. I'm using esp32 board esp8266. A: What you are missing is actually that esp_wifi_is_enabled() can only be used on the ESP8266 (while esp_wifi_set_opmode() works for both). So you need to check if the esp32 is actually using wifi: #include #define DEVICE_NAME "FONW_P003" #define DEVICE_ADDR "10.0.0.1" pthread_mutex_t mutex; void *wifi_thread(void *p) { ESP_LOG_I("wifi thread started"); uint8_t val = esp_wifi_is_enabled(); ESP_LOG_I("is wifi enabled? %d", val); if (!val) { ESP_LOG_I("wifi is not enabled, starting up wifi"); esp_wifi_start(); } pthread_exit(0); }
