AutoCAD and its sister product AutoCAD LT (AutoCAD is short for Auto-Cad Graphic Design Software; LT stands for "Lessons Learned") are used worldwide to create drawings for a wide variety of fields such as architecture, construction, engineering, landscape design, surveying, video, multimedia, and others. AutoCAD uses point-and-click graphic interface and the functionality is based on a tabbed windows interface. The program has a number of useful tools and functions for drafting, such as line, arc, ellipse, polyline, spline, text, and basic surface and solid modeling functions, as well as a powerful graphics and data management system. Overview The AutoCAD 2010 interface consists of the following major components: A three-dimensional (3D) Modeling workspace; A two-dimensional (2D) Drawing workspace; A tool bar with functionality related to the tools used in the 2D drawing; The ribbon; The legend panel, which is used to access data; The status bar, which indicates the status of the programs, its features and file sizes; The bookmarks panel; Layers and palettes. Tools The AutoCAD 2010 window is divided into two main sections: a 2D drawing area and a 3D modeling workspace. Both of these areas can be minimized and restored. A toolbar (the ribbon) is located at the top of the screen, and it contains options for viewing, editing, saving, and other functions. The ribbon makes it easy for the user to switch between one area and another. The ribbon also contains some of the commands found on the menu bar. The ribbon has a few sections. The "Document" section shows the active object in the current drawing or 3D modeling workspace. The "Edit" section contains tools and functionality related to the selected object. The "Drawing" section shows tools to use with the current object. The "Options" section is used to edit some of the standard AutoCAD options. The legend panel (or dialog box) contains a variety of information, which include options, features, and other functions that are not directly related to the selected item. Bookmarks Bookmarks are used to easily access a particular area in a drawing, to change the view to a specific area or to return to an area without searching for it.

Start Autocad and load your project into it. Now you have to choose an image to print from the loaded project. Click on the "Start a Print Job" button. Choose an external USB printer. You will get an error when printing. This error is normal, because the dimensions of the printed image are not the same as the file dimensions. Click on the "Exit" button. NOTE: Make sure that the selected image's EXIF data is saved. Save the EXIF data of the image in another file. Convert the other EXIF data of the image to the same file format, and then use it. Sacramento International Airport (SJC) receives \$4.7 million to expand international terminal By Gene Maddaus and Karen Pulfer Staten November 19, 2017 The Sacramento International Airport Authority (SAA) today unanimously approved the selection of a design/build contractor for a \$40 million expansion of its international terminal. The expansion is designed to accommodate the growing number of international travelers, and to expand the number of connecting flights to Asia and Africa. The new international terminal will open in early 2019 and will be accessible by both Uber and Lyft drivers and from the adjacent Light Rail station. Light Rail ridership is projected to increase to 50,000 by the time the new international terminal is completed. "The Sacramento International Airport is the leading airport for air travelers in the Sacramento region. We have the most international flights and the fastest ramp and the largest international terminal in the state," said SAA Director Brad Huff. "That said, we know we have room for improvement and we are working on that. For example, we could be doing more to take care of our air travelers and help with their needs." The expansion, funded by the recently approved \$2.6 billion General Fund Capital Improvement Project (GFCIP), will replace the existing international terminal at SAA and add a second level and a number of new jet bridges. The decision to move forward with the international terminal expansion project came about after a comprehensive survey was conducted to understand the expansion options and to get feedback from the public. This survey also led to the first phase of SAA's recently approved master plan. "This expansion will improve the experience of our international customers and allow us to keep them flying through Sacramento," said SAA CEO Marta DiP
