Q: HTML: is there any syntax for definition of hyperlink tag and link that refer to some URL? If I want to define a hyperlink tag and an anchor tag that refer to some URL, is there any syntax in HTML? I want to define some tags that create some "link to URL" to be actually used like this: Site name But the page that I want to use these hyperlink and link are already existing, so I cannot change the tags in any way. Also I can't make a new page that will be "inside" of the existing page, I need to directly modify the HTML of the existing page. A: There are two ways to define links: on the content, and within the anchor. When you write: Site name You are actually defining the link 'Site name' as a hyperlink. The link will be underlined, which indicates that the user is directed to that link. The link itself has no text, it is simply a pointer to where the text itself is located. When you have an anchor tag: The name of this anchor tag is foo. When the user clicks on the name of the anchor, it takes the user to the name of the anchor in another page. If the name of the anchor is foo, then the name is displayed in the address bar at the top of the window. If you want to edit a page, you need to do it in a content-management system such as WordPress. Otherwise, you will have to parse the HTML file into its components and then, perhaps, do what you need. Q: new way to include all libraries present in the lib folder I'm working on an application with multiple modules (similar to the Cakephp framework) and I'm using the cakephp framework(libraries) to separate my application into "modules". The framework works fine. My problem is that I include some files in the cakephp framework using the following command require './lib/Cake/Network/Request.php'; in some files I use this but what I'm wondering if there is a way to avoid duplicating the path and the file name each time I include this file in the corresponding file. I have

This product is good, but it sure takes a ton of time to strip and trim the cable. You have to remove about 8 feet of shielding, plus you have to cut into the jacket, apply a couple of coats of Adhesive paste to get the original Qwertz and Nyko logo on the strip at the ends of the cable. Once it's been primed and coated, you can't roll it into a standard plug, it has to be crimped. However, after about 20-30 seconds, the crimping of the ends of the cable is much easier than setting up any of the other kits that are on the market. Saving Money Great, inexpensive solution for a 1-3 player game of ps2. It is a nice cable and cheaper than a standard EAX cable. The Qwertz and Nyko logos were a pain though. But I think they must have had a reason for putting them there. Bottom Line Works great! Expert Review The Qwertz Premium Selectable Micra 2-Port Cable Adapter provides premium quality connections to your computer for the GameCube, PlayStation 2, PlayStation 3, Xbox, and Xbox 360. While the specifications of the adapter are average, its price tag is not. The Qwertz Premium Selectable Micra 2-Port Cable Adapter offers a nice connection for your console of choice, but the problem arises in using the adapter. The Qwertz Premium Selectable Micra 2-Port Cable Adapter requires that you supply your own PS2 cable. This requires you to be prepared to purchase this cable for a minimum price of \$1.99. If you purchase a brand new PS2 cable then you could possibly avoid purchasing the premium adapter, but if you plan to buy a used PS2 cable then you may be better off purchasing the Qwertz Premium Selectable Micra 2-Port Cable Adapter. The Qwertz Premium Selectable Micra 2-Port Cable Adapter is sold at a very low price of \$29.99. While the price may be low, you have to expect a few different things when you purchase it. The price of this adapter is much lower than it should be. When you purchase this adapter, you must expect its quality to be low. The adapter offers a 4-port PS2 connection. There are 4 ports, but only 3 ports are for the PS2 connection. These ports are for the GameCube, PlayStation 2
